Honors-Awards

King's Research Experience Award
SCIS Academic Excellence Award (valedictorian)
SCDF 1st Division HQ Wall of Fame
SCDF Service Excellence Award
SCDF Best Trainee Award

Samuel Zhang

AI @ Imperial | Co-founder @ coverd.ai
London, England, United Kingdom

Summary

Imperial College MSc student specialising in AI and ML applications. Devised enterprise-scale data solutions at Pfizer achieving 1200% efficiency gains. Initiated and created predictive analytics systems for emergency services and developed full-stack ML applications. Proficient in Python, deep learning frameworks, SQL, and cloud infrastructure with proven ability to translate business requirements into technical solutions.

Experience

Marsh Risk

AI Intern – Data & Machine Learning
May 2026 - Present (3 months)
London Area, United Kingdom

AI research and implementation in relation to insurance lead matching.
A 4-month project as part of my MSc thesis

coverd.ai

Founder
March 2026 - Present (5 months)
London Area, United Kingdom

1482: The "First" CV was created by Leonardo da Vinci. He penned a letter to the Duke of Milan, listing his skills and experiences seeking a job.

2026, with the rise of LLM and CV writers tools, CV contains much less valuable information about the candidate, creating a pool of diluted "polished mediocrity". Whilst the explosion in applications and shrinking job market is drowning recruiters in polished, technical jargon that is all polished in the same way.

We are doing something different: a fully equipped application tracking system that has recruiters at heart, using explainable and responsible AI to solve the main pain points of recruitment (phone interview, targeted questions, etc.),

leaving the decision-making to the recruiter throughout the entire recruitment process.

In the next 3–5 years, the job market will change drastically. But I am confident in taking the stand that recruitment, like healthcare and education, NEEDS to be a human process, with ethics and bias reduction at the centre of it all.

At Coverd, where we put humans first in recruitment.

Stealth AI Startup

Co-founder

November 2025 - Present (9 months)

London Area, United Kingdom

- AI solution in recruitment focused on bias reduction

Pfizer

Web Application Developer | Product Owner

October 2024 - April 2026 (1 year 7 months)

London

- Led product ownership of the GROWMAT system at Pfizer, defining product roadmap and prioritising features to align with business objectives and end-user needs
- Managed stakeholder relationships with Pfizer leadership, conducting regular requirement gathering sessions and translating business needs into actionable development priorities
- Drove continuous product enhancement through iterative development cycles, delivering new features that improved system functionality and user adoption

KCL Chemistry Society

STEM Outreach Officer, Coding Series Tutor

September 2022 - April 2025 (2 years 8 months)

London, England, United Kingdom

- Led development and delivery of > 20 hours computational skills course for chemistry undergraduates for 2 years in collaboration with King's College London Chemistry Department
- Designed and coordinated STEM outreach activities to enhance student engagement in chemistry department
- Organised industry and research speaker series to provide career insights and networking opportunities

- Facilitated intercollegiate chemistry competitions to promote teamwork and academic excellence
- Created support platform for academic guidance, ethics education, and professional development
- Mentored peers in pursuing extracurricular opportunities and developing intellectual curiosity

Pfizer

1 year

Data Analyst Undergraduate in Analytical R&D Informatics Team (Data Engineering)

November 2023 - August 2024 (10 months)

Sandwich, England, United Kingdom

- Devised full product development of enterprise resource management platform after redundancy, spearheaded user research, defining technical requirements, and leading Agile team achieving department-wide adoption
- Achieved 1200% efficiency increase and saved 120+ person-hours monthly through iterative full-stack development, database optimisation, and user feedback integration across multiple stakeholder groups
- Conducted comprehensive technical documentation including API specifications, user manuals, and video tutorials ensuring seamless adoption and long-term maintainability
- Engineered data-driven analytics dashboard achieving 99.9% uptime and 80% performance improvement using real-time KPIs, workload modelling, and continuous monitoring systems

Data Analyst Undergraduate in Analytical R&D Development Analytics (Scientific Programming)

September 2023 - November 2023 (3 months)

Sandwich, England, United Kingdom

- Archetyped predictive modelling tool using thermodynamic theory to reduce drug testing requirements
- Implemented solution in Julia using machine learning libraries for computational thermodynamics
- Accelerated pharmaceutical R&D workflows and saved drug development cost and time

King's College London

Intern Research Fellowship

June 2023 - July 2023 (2 months)

London, England, United Kingdom

- Conducted interdisciplinary research on biological membrane organization and protein-lipid co-assembly
- Investigated protein folding mechanisms during synthesis and interactions with lipid bilayers
- Applied chemistry principles to understand self-assembly of biological systems
- Focused on membrane proteins' role in cellular transport and communication
- Completed 2-month fellowship at King's College London's research facilities

King's College London

Intern Research Fellowship

June 2022 - July 2022 (2 months)

London, England, United Kingdom

- Awarded competitive King's Undergraduate Research Fellowship to lead molecular recognition investigation, collaborating directly with university faculty and PhD researchers on cutting-edge olfactory research
- Gained insight in research lifecycle for structural determination of chiral odorant exaltanone, operating advanced microwave spectroscopy equipment and coordinating with cross-functional scientific team
- Built automated Excel and MATLAB data processing workflows combining experimental spectroscopic data with computational predictions, streamlining analysis of complex molecular structures
- Bridged laboratory experimentation with computational modelling, demonstrating ability to synthesise multi-source data and deliver insights in highly technical, ambiguous research environment

Singapore Civil Defence Force

Human Resources NSF | Commander's Personal Assistant

July 2019 - July 2021 (2 years 1 month)

Singapore, Singapore

- Operated as strategic liaison to Commander while managing HR operations for 1,000+ frontline personnel, balancing high-priority executive support with large-scale workforce administration
- Spearheaded data-driven COVID-19 response initiative by developing predictive analytics system in MATLAB, enabling proactive resource allocation and emergency planning through statistical modeling
- Engineered automated workflow solution integrating multiple legacy systems, reducing emergency response time by 300% and eliminating manual processes for 1,000+ personnel

- Delivered real-time decision support platform through cross-system data pipeline integration, empowering leadership with actionable insights for critical operations
- Recognised for exceptional performance with SCDF 1st Division HQ Wall of Fame honor, Service Excellence Award, and promotion to Sergeant, demonstrating consistent delivery of high-impact solutions under pressure

Education

Imperial College London

Master of Science - MS, Artificial Intelligence · (September 2025 - September 2026)

King's College London

BSC Chemistry with Biomedicine with a Year in Professional Placement, Chemistry · (September 2021 - May 2025)
