

Samuel Zhang

Applied AI Engineer · Product Builder · Founder

London, United Kingdom • +44 7502 118207 • sam.xiaojian.zhang@outlook.com
linkedin.com/in/samuel-xj-zhang • me.samuelzhang.co.uk • coverd.ai

PROFILE

Applied AI engineer and founder building products for ambiguous, domain-heavy problems. Current work includes client-confidential responsible AI research and COVERD, an ATS-connected recruitment product that reviews applications, preserves evidence, and returns reasoned shortlists for human decision-makers. Voice interviews can add missing information. Previously delivered GROWMAT, an internal enterprise product documented in an external showcase; live company data, source code, credentials, and non-public operating context remain private.

CORE EXPERTISE

AI & ML: Multi-agent systems, RAG and retrieval, LLM and embedding evaluation, document intelligence, learning-to-rank, modeling and experiment design

Engineering: Python, Julia, SQL, TypeScript/React, PostgreSQL, Docker and CI/CD

Product: Customer discovery, rapid prototyping, stakeholder management, responsible AI and adoption

SELECTED EXPERIENCE

Senior Coordinator — Digital Transformation Strategy Internship

Marsh · Strategy & Corporate Development Group • London, United Kingdom

May 2026 – Present

- Conducted client-confidential applied-AI research in a regulated insurance setting, using documented evaluation methods, human oversight, and deployment safeguards.
- Translated evidence into decision support while keeping operational data, model design, and findings private.

COVERD | Founder & Product Lead (part-time)

Mar 2026 – Present

London, United Kingdom

- Led early discovery with four design partners and pivoted from candidate-side resume tooling; by April 2026, had tested three voice-interview architectures across 20 candidate interviews.
- Repositioned COVERD as an ATS-connected recruitment-intelligence layer that reviews applications across specialist dimensions and retains evidence for recruiter inspection.
- Builds ranked shortlists with reasons while recruiters retain the final decision; automated voice interviews are optional and used when applications lack information.

Pfizer, Analytical R&D | Web Application Developer & Product Owner (part-time)

Oct 2024 – Apr 2026

London, United Kingdom

- Owned the roadmap and stakeholder adoption for GROWMAT, an internal enterprise product; an external showcase documents its architecture and outcomes while live data, source, and non-public operating context remain private.

Pfizer, Analytical R&D | Data Analyst Undergraduate

Sep 2023 – Aug 2024

Sandwich, United Kingdom

- Built and delivered GROWMAT within a regulated R&D environment, improving an internal planning process and supporting wider product adoption.
- Worked across product discovery, full-stack delivery, reliability, and change management; the external showcase is public while live company data, source, credentials, and non-public operating context remain private.
- Explored scientific modeling workflows for pharmaceutical research; datasets, parameters, and results remain confidential.

EDUCATION

Imperial College London | *MSc AI Applications and Innovation – Predicted Distinction* **Sep 2025 – Sep 2026**

London, United Kingdom

Deep Learning, AI Safety, Innovation Management, Machine Learning in Medical Imaging, Machine Learning in Climate Change

King's College London | *BSc Chemistry with Biomedicine – First-Class Honors* **Sep 2021 – May 2025**

London, United Kingdom

Professional placement; Computational Chemistry, Molecular Biology, Chemical Biology, Organic Chemistry; Associate of King's College London

EARLIER EXPERIENCE, RESEARCH & PUBLIC SERVICE

King's College London | *Coding Series Tutor & Curriculum Designer* **Jan 2023 – Apr 2025**

London, United Kingdom

- Designed and delivered 20+ programming, data-analysis and introductory ML sessions for 80+ chemistry students.
- Organized a cross-industry data-science careers panel for 100+ students and mentored learners in using technical skills to widen their career options.

King's College London | *Summer Research Project* **Jun 2023 – Jul 2023**

London, United Kingdom

- Studied protein–membrane interactions *in silico* and used the analysis to refine experimental design.

King's College London | *Undergraduate Research Fellow* **Jun 2022 – Jul 2022**

London, United Kingdom

- Built MATLAB, Python and Excel tooling for rotational-spectroscopy analysis; named co-author on the 2025 ISMS conference record.

Singapore Civil Defence Force | *Commander's Personal Assistant / Sergeant* **Jul 2019 – Jul 2021**

Singapore

- Built decision-support and workflow automation during COVID-19 emergency operations using public epidemiological data; personnel records, operations, and scale remain protected.
- Supported senior leaders in time-critical operations, balancing incomplete information, rapid prioritization and accountability across large-scale personnel operations.

SELECTED TECHNICAL PROJECTS

- **Home Lab & Private AI Infrastructure** – Maintain a private Proxmox/Docker lab; its public audit covers a six-service Compose slice, one declared daily PostgreSQL backup job, and explicit restore-testing, health-check, and recovery-evidence gaps.
- **Stochastic Market Impact Simulator** – Built a Julia single-stock simulation of sentiment-biased buy/sell events, quantity-scaled stochastic price impact, cumulative volume and price-history statistics; added a seeded browser audit that exposed and corrected the original daily-metric window bug.

AWARDS & ADDITIONAL INFORMATION

Awards: King's Research Experience Award; Associate of King's College London (AKC); SCDF Service Excellence Award; SCDF 1st Division HQ Wall of Fame; EARCOS Global Citizenship Award

Languages: English and Mandarin (native/bilingual); Italian (elementary)

INTERESTS

Music	Competitive brass band euphonium player and member of a fourth-place UniBrass ensemble; performed in three musical-theater productions, including one self-directed, written, and composed.
Photography	Former professional wedding photographer, now photographing nature and friends for the joy of the craft, and the smile on people's faces.
Making	Builds computers and maintains private home infrastructure, with an increasingly noticeable electricity bill.
Beyond	Hiking, climbing, science fiction, and traveling.
